

Author agreement

Title of contribution (named 'contribution' in the following): A Note on the Period Enforcer Algorithm for Self-Suspending Tasks

Authors: Jian-Jia Chen and Björn Bernhard Brandenburg

The authors hereby authorize EDAA/EMSIG and Schloss Dagstuhl to organize the publication of the contribution in the journal *LITES – Leibniz Transactions on Embedded Systems* in electronic and printed form. The publication of the contribution will be protected by the Creative Commons Attribution 3.0 Germany license (CC BY 3.0 DE)¹. In brief, this license authorizes each and everybody to share (to copy, distribute and transmit) the work under the following conditions, without impairing or restricting the authors' moral rights:

- *Attribution:* The work must be attributed to its authors.

The journal *LITES – Leibniz Transactions on Embedded Systems* is published OpenAccess in electronic form and is maintained by EDAA/EMSIG and Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Germany².

The authors hereby grant to EDAA/EMSIG and Schloss Dagstuhl – Leibniz-Zentrum für Informatik

- the non-exclusive license to archive and make accessible (online and free of charge) for the public the contribution, along with any associated metadata and supplementary material (e.g. additional text, video, or research data) provided,
- to edit the contribution especially with regard to typesetting and language for reaching established publication standards,
- to notify digital archive systems thereof, and
- to convert the contribution for the purpose of archiving.

The authors warrant that this publication and the supplementary material will not infringe any rights of third parties. The authors retain all rights to use in future works all or parts of the contribution.

The authors agree to exempt the publishers from third-party claims in connection with alleged copyright or usage right violations arising from culpably false statements made by the authors with respect to the non-existence of third party rights, or from other circumstances for which the authors are responsible by virtue of the article's publication in *LITES – Leibniz Transactions on Embedded Systems*. This does not apply if the injury results from intentional or grossly negligent behavior on the part of the publisher and its staff, and if the authors are not culpable of comparable gross negligence or deliberate intent. In the latter case, damages will be allocated taking into account the share of blame incurred by each party. If a third party claims that the publication of the article has given rise to a copyright violation, and if the authors are unable to appropriately rebut that claim such that his entitlement is credibly established, when asked to do so by the publisher, the publisher may restrict access to the article until the legal situation has been clarified.

To support the publishers of *LITES – Leibniz Transactions on Embedded Systems* in preparing the journal volume, the author hereby agree to provide all source material (LaTeX files, graphics, ...) as well as detailed meta data (full names of the authors, title of the contribution, contact author, e-mail address of the contact author, keywords, classification (ACM 2012), and abstract of the contribution).
